

## Capabilities

Aria meets or exceeds standards for security, compliance, and availability for cloud-based monetization platforms without compromising functionality.

## Compliance

- PCI DSS
- HIPAA Certified
- TRUSTe Certified Privacy Seal
- ISAE 3402
- SSAE 16 (SOC 1 Type II)
- EU-U.S. Privacy Shield and Swiss-U.S. Safe Harbor

## Enterprise-grade Availability

- 99.9% service availability
- LiveRelease™ downtime-free upgrades and maintenance

## Private Cloud Options

- Single-tenant private suite
- Single-tenant public
- Multi-tenant public

## Data Replication

- Integration with existing ERP allows data replication across systems.

## Secure by Design

- Ongoing third-party audits
- Continual downtime-free updates

# Aria Enterprise-grade Security

## Enterprise-grade cloud without compromise

Adopting a cloud-based billing SaaS platform should not compromise your enterprise-class service. Aria meets or exceeds industry standards for security and data privacy, including PCI DSS, TRUSTe, and the Health Insurance Portability and Accountability Act of 1996 (HIPAA). Aria enterprise-grade security saves you the cost and resources it takes to meet these stringent requirements.

Aria's cloud-based billing software also provides 99.9% service availability, supports an unlimited number of transactions, safeguards your customers' data, and seamlessly connects with your infrastructure and business applications (including ERP cloud services), to meet the demands of your growing business.

Aria sits at the center of your operations, supporting your recurring revenue strategy every step of the way—securely, reliably, and affordably. Aria is built using carrier-grade, industrial-strength hardware and software for organizations that are serious about growing their recurring revenue quarter after quarter.

## PCI compliant

Aria meets the stringent standards required for the latest Payment Card Industry Data Security Standards compliance, version PCI DSS. Being PCI compliant ensures companies that appropriate safeguards are in place to protect network security, firewall defense, and process and coding controls so that critical customer credit and personal data remain uncompromised and protected.

PCI DSS is the highest PCI standard, ensuring the use of the best protections available today. It is assessed and governed by the PCI Security Standards Council, an independent third party comprising the major credit brands. Aria maintains a dedicated team to ensure that the company continuously upholds the highest security standards in the industry.

## HIPAA compliant

HIPAA sets the requirements for protecting patient data for any organization managing protected health information. According to the rigorous six-month third-party risk assessment and audit process conducted by Trustwave, Aria Systems exceeded the levels of administrative, physical, and technical safeguards and best practices needed to ensure HIPAA patient privacy and security compliance.

HIPAA certification assures healthcare organizations that their monetization processes entrusted to Aria maintain the highest standards of patient privacy and data protection. Aria's enterprise-grade cloud services for healthcare enable the industry to monetize new opportunities, IoT (Internet of Things) technologies and record digitization.

### TRUSTe Certified Privacy Seal

TRUSTe certification demonstrates that Aria has successfully fulfilled TRUSTe's rigorous program requirements and provides the highest level of protection to safeguard user privacy and personal information. Aria Systems has been TRUSTe certified since 2014.

### EU-U.S. Privacy Shield Framework

Aria is among the first companies to receive this third-party validation indicating that the platform meets the rigorous qualifications for the EU-U.S. Privacy Shield Framework. Compliance assures that Aria meets European Union (EU) data protection requirements for personal data transferred from the EU to the U.S. in the course of doing business. The EU-U.S. Privacy Shield replaces EU-U.S. Safe Harbor Framework.

### Other security and privacy certifications

- **SOC 1** - Statement on Standards for Attestation Engagements Type II certification assures that data used in financial reports meets stringent security, auditing and operational requirements. Aria maintains this certification to help your organization survive audits unscathed.
- **ISAE 3402** - Aria maintains this assurance standard, which defines the standards an auditor must employ in order to assess the contracted internal controls of a service organization.
